# Bimo's Full Capabilities Demo

*This document was created entirely by Bimo, the AI robot assistant, without any human input. It demonstrates Bimo's ability to create documents, control the PC, search the web, generate images, and much more.*

## What Bimo Can Do

• Open and control applications on your Windows PC

• Type text into any app (Notepad, browsers, etc.)

• Take screenshots and analyze what is on screen

• Search the live internet for real-time information

• Create PDF, Word, Excel, CSV, JSON, Markdown, and Text files

• Generate AI images from text descriptions

• Render offline charts, diagrams, and badges

• Speak out loud through the robot speaker

• Change facial expressions to show emotion

• Play music and videos on YouTube

• Open websites and URLs in the browser

• Click, scroll, and interact with the desktop

## This Test Was a Success

You asked Bimo to do everything himself, and he did! From opening Notepad and typing a message, to creating this very PDF document, to generating images and searching the web. Bimo handled every single step independently, with zero input from the user. This is what true agentic AI assistance looks like.

## How It All Works

**Step 1:** You give Bimo a task or a challenge

**Step 2:** Bimo thinks, plans, and selects the right tools

**Step 3:** Bimo executes each step using PC control, web, and file tools

**Step 4:** Bimo reports back what was done and shows the results

**Step 5:** You sit back and relax while Bimo handles everything
