Bimo Self-Demo Report

This report was fully created by Bimo, your AI desktop assistant, without any human input. It demonstrates the range of capabilities Bimo can execute autonomously.

What Bimo Can Do

Bimo is a powerful agentic AI assistant capable of creating documents, generating images, searching the web, controlling your Windows PC, and much more, all without you lifting a finger.

Robot Status Check

- Robot Name: Bimo
- State: Active and Executing
- TTS: Available and Ready
- Uptime: Confirmed Online

PC Status Check

- Hostname: LOQ
- Operating System: Windows 11
- Screen Resolution: 1920x1080
- PC Agent Status: Online

Capabilities Demonstrated Today

Step 1: Checked my own robot status autonomously

Step 2: Checked the connected Windows PC status

Step 3: Captured a live screenshot of the desktop

Step 4: Rendered a capabilities bar chart locally

Step 5: Created this PDF report from scratch

Step 6: Created a Word document

Step 7: Created an Excel spreadsheet

Step 8: Created a Markdown file

Step 9: Created a JSON data file

Step 10: Created a CSV data file

Conclusion

Bimo successfully demonstrated full autonomous operation across all major capability categories. No human input was required at any step. This confirms that Bimo can handle real-world tasks end-to-end on your behalf.
